

The sample required for testing for thrombopathia in Landseers is a 2 ml EDTA tube (purple top) containing at least 1 ml of whole blood. Care should be taken to not cross contaminate samples during collection, particularly if more than one dog is collected at the same time. Samples should be labeled clearly so that there is no confusion regarding sample identification. Samples should be kept cool (use ice packs; do not freeze the samples) and shipped to the address below. Take care to make sure tubes are protected well to prevent breakage during shipping. Please do not ship on Friday or the day before a holiday. The fee for testing is \$100 per sample. Label packages as "Molecular Diagnostic Material".

Make checks payable to: Auburn University, Department of Pathobiology.

Please provide the following information on each dog being tested (print clearly or type):

Pedigree Name

Studbook

Number (nr)

Sex

Male or Female (Circle one)

Age at time of sampling or Date of Birth

Name of Sire

Studbook and Studbook Number of Sire

Name of Dam

Studbook and Studbook Number of Dam

I am hereby requesting this sample be tested for the mutation described as causing Thrombopathia in Landseers. I certify that I am the owner of this dog. I understand and agree that the results of this test may be shared publicly in a manner that will allow identity specifically to my dog. I release Dr. Boudreaux and any associates working with her and Auburn University from all liability regarding this sample.
